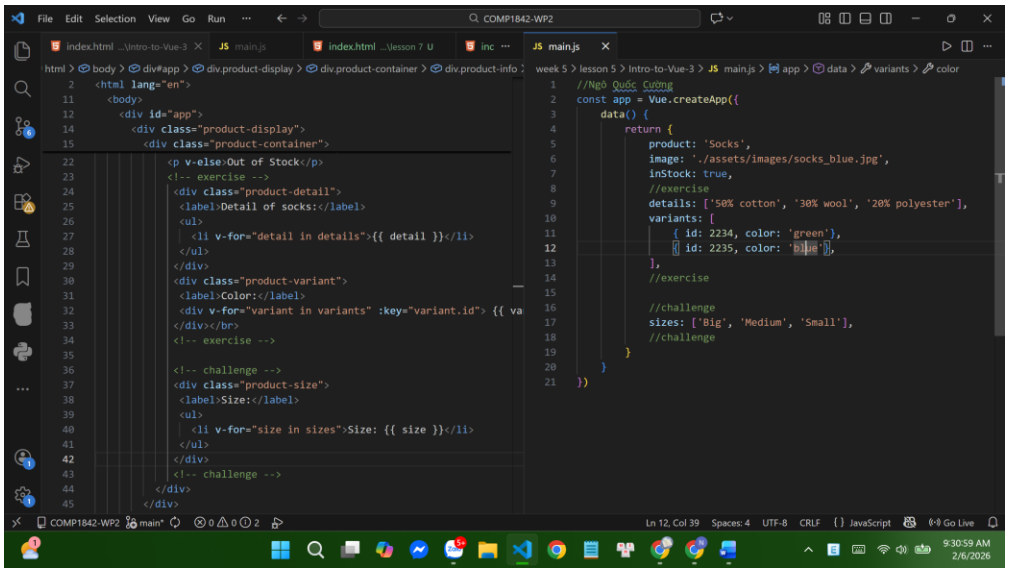
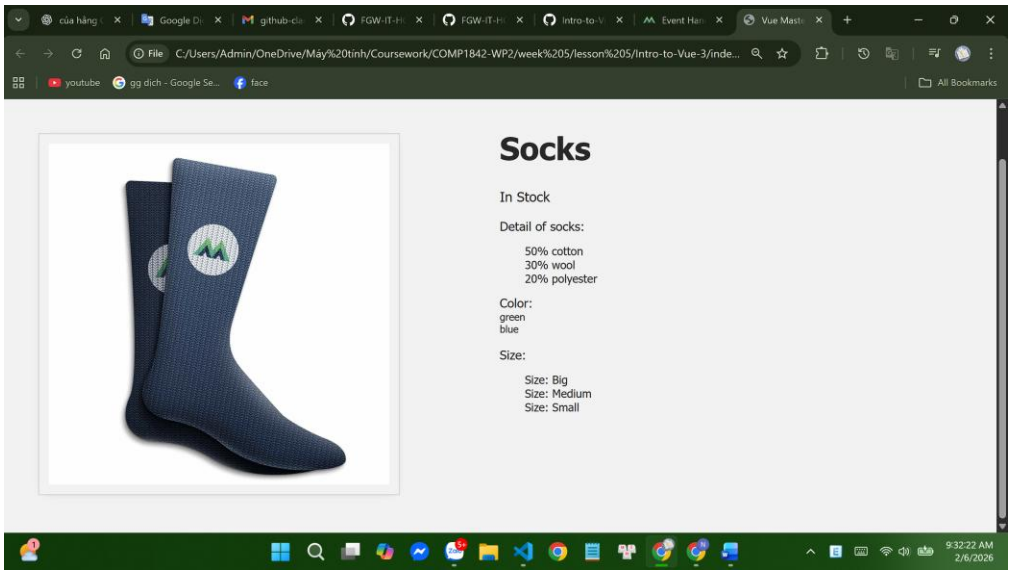
1. Lesson 5

Exercise + Challenge:





2. Lesson 6

Exercise + Challenge:

```html
<html lang="en">
  <body>
    <div id="app">
      <div class="product-display">
        <div class="product-container">
                <li v-for="detail in details">{{ detail }}</li>
              </ul>
            </div>
            <!--exercise--> <!--Ngo Quoc Cuong-->
            <div class="product-variant">
             <label>Color:</label>
             <div v-for="variant in variants" :key="variant.id" @mouseover="updateImage(variant.image)"> {{ variant.color }}</div>
            </div>
            <!--/exercise-->

           <!--exercise-->
           <button class="button" v-on:click="addToCart">Add to Cart</button>
           <!--/exercise-->

           <!--challenge-->
           <button class="button" v-on:click="deleteCart">Delete Cart</button>
           <div v-if="cart === 0" class="notification">Your cart is empty</div>
           <!--/challenge-->
          </div>
         </div>
        </div>
      </div>

      <!-- Import App -->
```

```javascript
const app = Vue.createApp({  //Ngo Quoc Cuong
    data() {
            variants: [
            ]
        }
    },

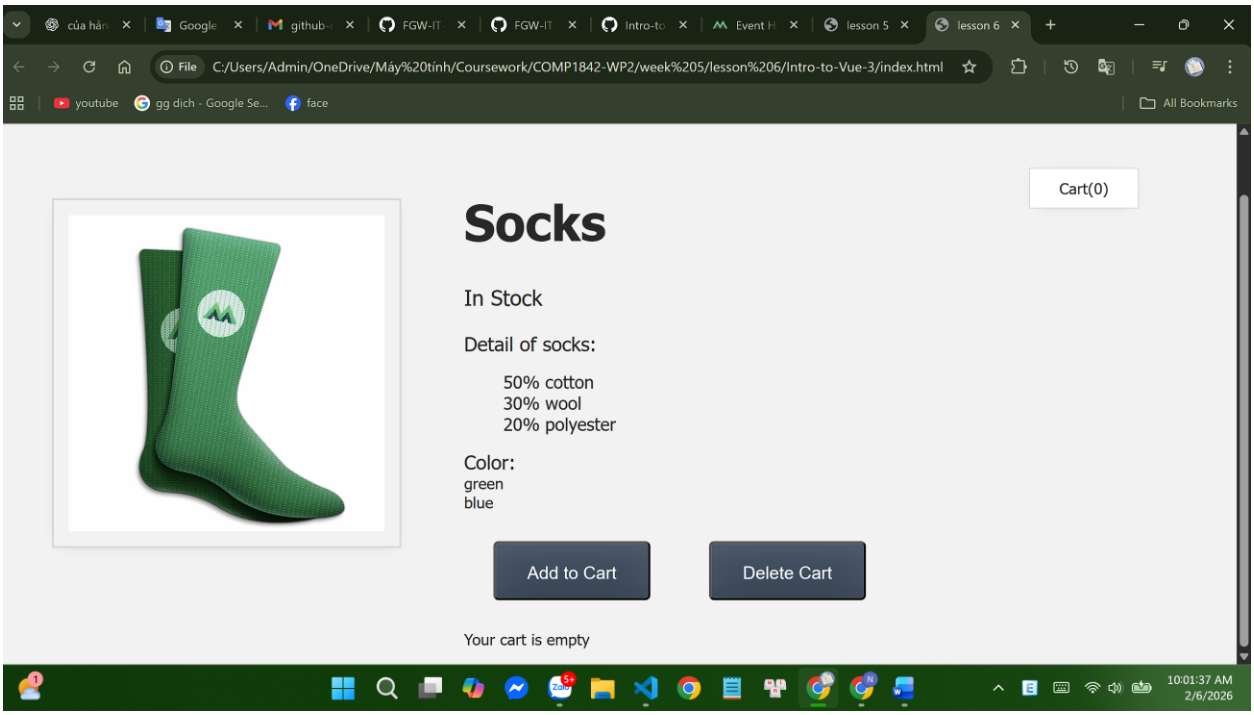
    //exercise
    methods: {
        addToCart() {
            this.cart += 1
        },
        updateImage(variantImage) {
            this.image = variantImage
        },

        //challenge
        deleteCart() {
            if (this.cart >= 1) {
                this.cart -= 1
            }
        },
        //challenge
    }
    //exercise
})
```

```javascript
const app = Vue.createApp({  //Ngo Quoc Cuong
    data() {
        return {
            cart:0,
            product: 'Socks',
            image: './assets/images/socks_blue.jpg',
            inStock: true,
            details: ['50% cotton', '30% wool', '20% polyester'],
            variants: [
              { id: 2234, color: 'green', image: './assets/images/socks
              { id: 2235, color: 'blue', image: './assets/images/socks_
            ]
        }
    },

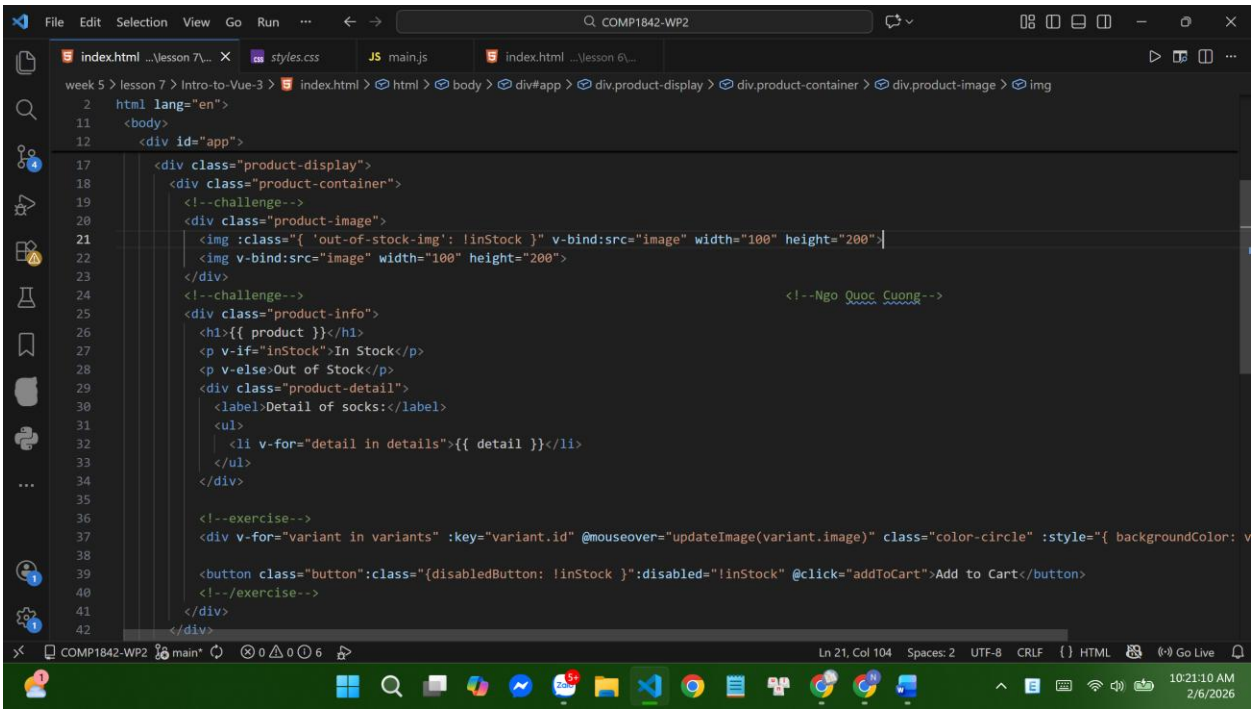
    //exercise
    methods: {
        addToCart() {
            this.cart += 1
        },
        updateImage(variantImage) {
            this.image = variantImage
        },

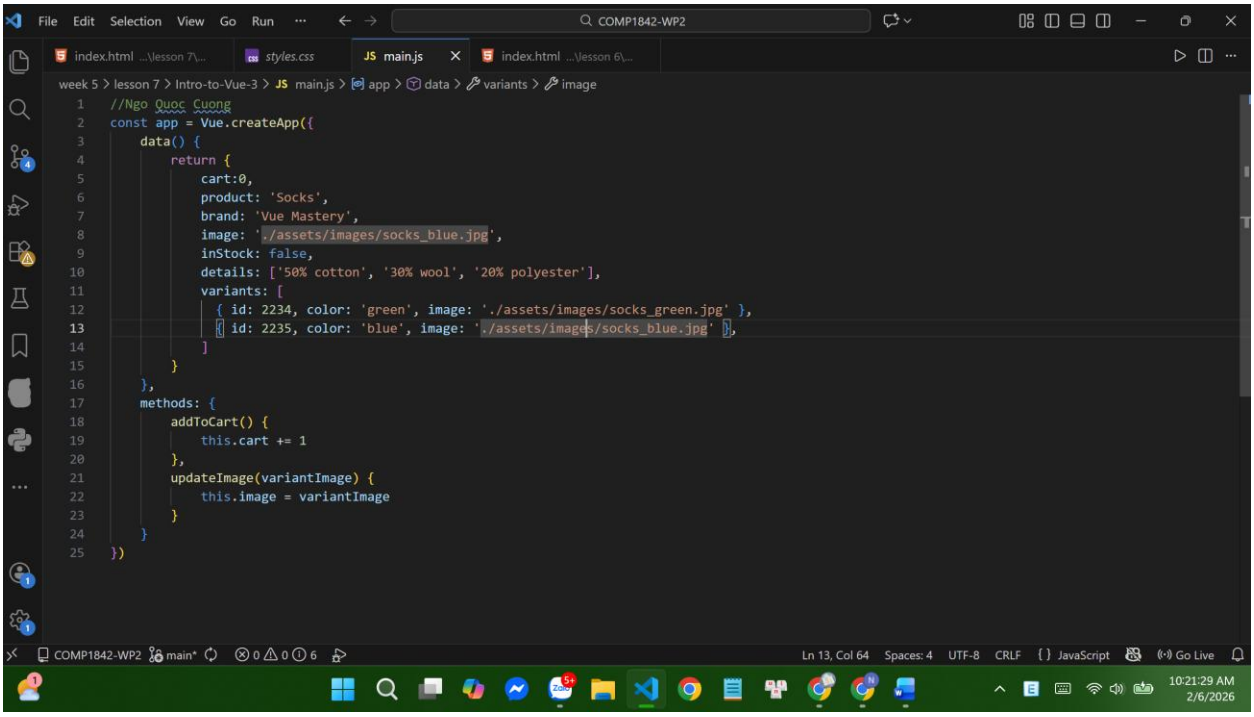
        //challenge
        deleteCart() {
            if (this.cart >= 1) {
                this.cart -= 1
            }
```

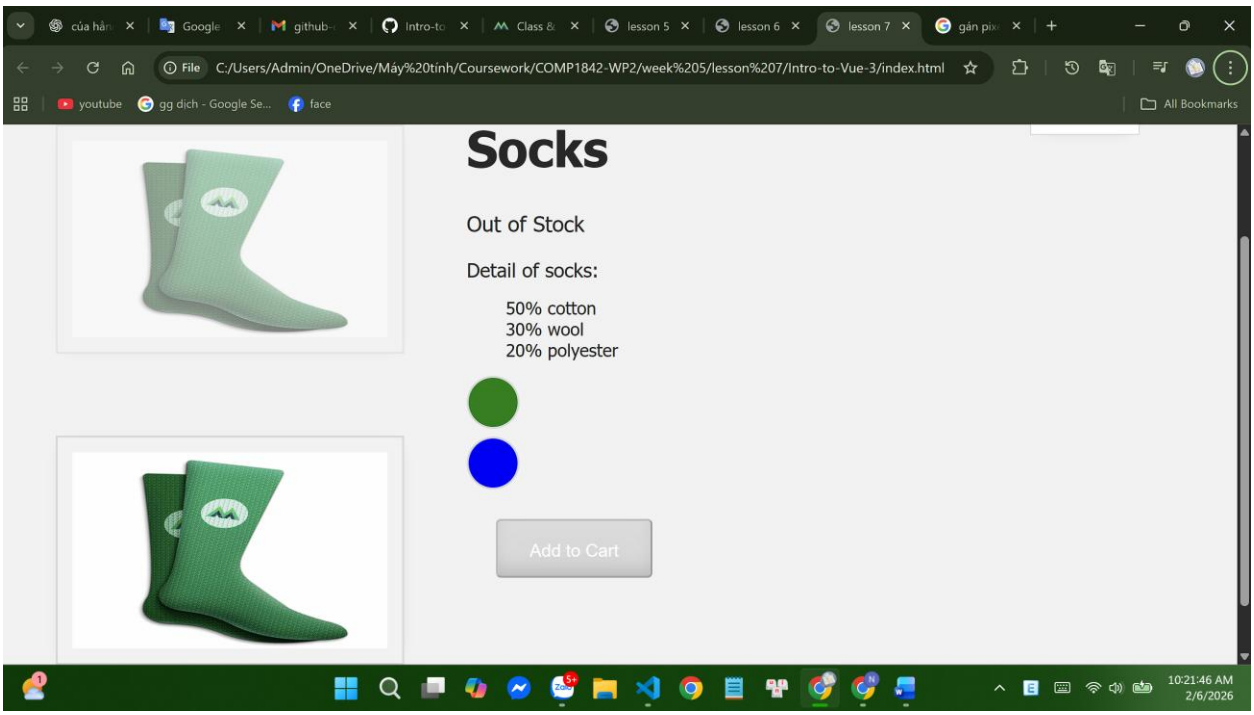


3. Lesson 7

Exercise + Challenge:







4. Understanding

After viewing and completing lessons 5, 6 and 7 in the Vue 3 Introduction course on Vue Mastery, I gained a better understanding of how Vue handles dynamic content and user interaction. In lesson 5, I learned how to use v-for

to display lists from arrays and objects. This helped me understand how Vue can efficiently display repeating elements like product lists. Lesson 6 focused on event handling, where I learned how to use v-on or the shorthand "@" to respond to user actions such as clicks and form submissions. By writing these methods inside the Vue application, I can keep the logic organized and separate from the HTML structure, making the code more readable and maintainable. Lesson 7 introduced class and style binding, showing me how to dynamically change the appearance of elements based on data values. Instead of manually adding or removing CSS classes, Vue allows styles and classes to automatically react to state changes. Overall, these lessons helped me see how Vue connects data, events, and user interfaces in a smooth workflow. I now understand how to build more interactive interfaces, where lists are updated correctly, user actions trigger logic, and visual changes respond naturally to the application's state.
